

Where passion comes to bloom

FREESIA

Catalogue

VAN DEN BOS

freesia

Originally from South Africa...

The Freesia was discovered in South Africa and is named after the botanist Friedrich Freese around 1830. When we were designing this catalogue we focused on the roots of the Freesia which began in South-Africa.

Since 1946, the Van den Bos team has tried to do our utmost to deliver to our customers the best quality corms and cormlets every single day. In the Netherlands we have a mother stock greenhouse to ensure we always have healthy stocks.

You have certainly come to the right address for your exclusive freesia varieties. We offer freesia varieties from our own collection and series from leading breeders. You can find our complete range of varieties in this catalogue, carefully selected through the years with feedback from our customers.

Our vast collection has been sub-divided into three segments: the single-flowers, the double-flowers and the last segment covers the 'Beach' varieties, which are more tolerant of warmer soil temperatures.

We have regional Account Managers throughout the world as well as our own Van den Bos locations in the United States, Canada, China and Australia. Our Account Managers are genuine specialists and they will support you with personal growing advice for your region.

Our international offices, agents and representatives are listed in the back of this catalogue. Wherever you are in the world, you can count on us!

Let's grow freesias together!

Single flowers

- High production
- River series high fusarium resistance
- Sweet-scented flowers
- Full colour range

Single flowers	Page 3 - 11
Double flowers	Page 12 - 17
Beach varieties	Page 18 - 22
Contact & specifications	Page 23 - 24
